

Pushout theft is avoidable.

Pushout theft is accelerating across grocery retail. As major chains invest in advanced prevention technology, the problem doesn't disappear—it shifts. Independent and specialty grocers are increasingly in the crosshairs, with ORC boosters using carts to scale up their theft and leaving operators to absorb the losses.

Purchek® technology stops pushout theft at the source—disabling cart wheels before stolen goods reach the exit. By preventing theft in a non-confrontational way, it safeguards employees, reassures customers, and works seamlessly with existing systems.

For grocers, the bottom line is clear: the question isn't if pushout theft will happen, *but when*.
